

# Electrostatic spice applicator Model SAS 1 S

This model is designed to atomise a slurry mix of dry spice and oil. These units are designed to fit into an existing drum or conveying system and it will run from any oil pump. Its benefits include a low misting system, which offers cleaner production lines, and it can also be cleaned in situ.

It has been thoroughly tested with spice manufacturers and end users, who say it is “the best they have seen in the marketplace” for putting spices onto products. It is now in service on over 400 lines, from 10kg - 15,000kg per hour. It offers 100% coating of all products, combining greatly improved quality with spice savings.

Can your sales force deliver increased sales of over a MILLION packets of chips per line every year?

Can you win that much business from your competitors?

Those are the increases you’d need to achieve in order to gain the same improvements in profit that **SAS**’ equipment can deliver for you.

Spice Application Systems can increase your profits dramatically with the introduction of more efficient production processes.

The **SAS 1 S** is:

- economical to buy
- economical to run
- fast payback on investment
- less fall off of spices
- cleaner production lines
- helps remove misting
- lowers slurry usage
