

Electrostatic spice applicator Model SAS 1 DV

These Dry Vibrator units are designed to fit into an existing drum or conveying system and will operate with any screw feeder. They provide a low dust system, which translates into cleaner production lines and more environmentally-friendly working conditions, and are designed to be cleaned in place.

The Model SAS 1DV has been extensively and thoroughly tested with spice manufacturers and end users, who say it is “the best they have seen in the marketplace” for adding spices onto products. It is now in service on over 400 lines, from 10kg - 15,000kg per hour. It offers 100% coating of all products, combining greatly improved quality with major savings on powder wastage.

Can your sales force deliver increased sales of over a MILLION packets of chips per line every year?

Can you win that much business from your competitors?

Those are the increases you’d need to achieve in order to gain the same improvements in profit that SAS’ equipment can deliver for you.

Spice Application Systems can increase your profits dramatically with the introduction of more efficient production processes.

The SAS 1 DV is:

- economical to buy
- economical to run
- fast payback on investment
- less fall off of powder
- cleaner production lines
- helps remove dusting
- lowers powder usage
